What is JavaScript?

JavaScript is a scripting language. JavaScript can update and change both HTML and CSS. JavaScript can calculate, manipulate and validate data.

Write down difference between Declaration and Initialization a variable?

Declaration tells the compiler about the existence of an entity in the program and its location. When you declare a variable, you should also initialize it. Initialization is the process of assigning a value to the Variable.

In how many ways we can define a variable?

A variable is defined in three different ways,

- **Var:** in "var" a variable can be declared and valued again.
- **Let:** in "let" a variable can be valued again, but can't declared again.
- **Const:** in "const" a variable can't be declared and valued again.

Is variable is case sensitive?

Yes, it is case sensitive.

When we declare a variable can we start it with any number?

Variable names cannot start with a digit.
